

# Operating System Diagnostics

Specifications and Requirements

ICTSAS308

# Contents

- *Define requirements* in the context of ICT systems
- *Examine specifications* for hardware and software
- *Investigate specifications/requirements for ICT systems*
- *Research some examples*

# What are requirements?

- Requirements are **essential** to the **correct operation** of something else
  - A **description** for *something needed*
- Requirements are used as **product development inputs**
  - Customer needs
  - Organisational need
  - Hardware needs
  - Existing integration needs

*Product Development Lifecycles*

# What are requirements?

- Each **requirement** should be:
  - **Cohesive/Atomic**: Address *one thing* only
  - **Complete**: *Fully stated* with no missing information
  - **Consistent**: *No contradictions* with other requirements
  - **Current**: Should *not be obsolete*
  - **Unambiguous**: *No jargon/complexity* that may cause confusion
  - **Importance/Priority**: Sometimes requirements are *prioritised*
  - **Verifiable**: The implementation of requirement *can be tested*

# What are specifications?

- A **specification** is a **technical requirement**
  - *Explicitly states the **technical details** of an ICT system*
- **Example specifications:**
  - **Min/Recommended hardware** to *run a game*
  - **Hardware requirements** to *connect to a device*
  - **Software drivers required** to *service an app*
  - **Network requirements** to *service a web-server*

## SYSTEM REQUIREMENTS

Windows

Mac OS X

SteamOS + Linux

### MINIMUM:

OS: Windows Vista or greater

Processor: 2 Ghz

Memory: 2 GB RAM

Graphics: 256 mb video memory, shader model 3.0+

DirectX: Version 10

Storage: 500 MB available space

Processor: 200 MHz available space

Storage: 500 MB available space

# Requirements vs Specifications

- A *requirement* dictates what a product *should do*
- A *specification* details what a product *does & how*
- Specifications *describe details* for **completed products**
- Both are *heavily used* in **engineering** and **product development**
- We must ensure *all specifications and requirements* are considered when *performing maintenance* or using *diagnostic tools*

GeForce GTX 1650	
Architecture	Turing Shaders
Boost Clock	1665 MHz
Frame Buffer	4 GB GDDR5
Memory Speed	8 Gbps

# Hardware Specifications (Example)

- **Graphics Card** – Nvidia GEFORCE GTX1080

Specifications	
Base Clock Speed	1607MHz
Memory Capacity	8 GB GDDR5X
Bus	PCIe 3.0
Maximum Digital Resolution	7680x4320 @ 60Hz
VR Ready	Yes
DirectX	12 API with feature level 12_1
Vulkan API	Yes
OpenGL	4.5

# Hardware Requirements (Example)

- **Graphics Card** – Nvidia GEFORCE GTX1080

Requirements	
OS Certification	Windows 7-10 <sup>1</sup> , Linux, FreeBSDx86
Graphics Card Power	180 Watts
NB: Windows 10	Requires November 2015 update or newer

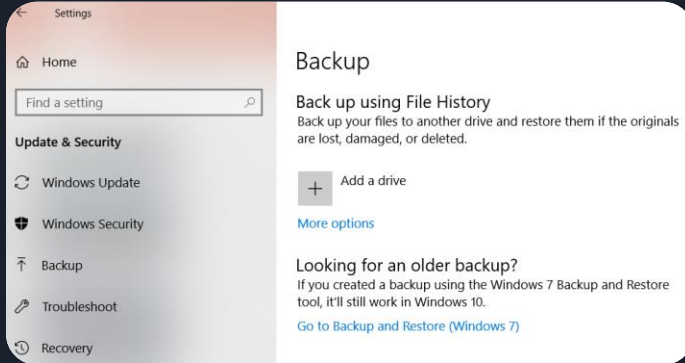

- See [Nvidia website](#) for more details

# Windows 10 Backups (Example)

- Backup your **Windows 10 files** with “*File History*”
- *Requirements:*
  - An *external drive* or *network location* is **required**
  - The *destination* **must be** available for **backups**
    - Or a new destination to be selected via settings

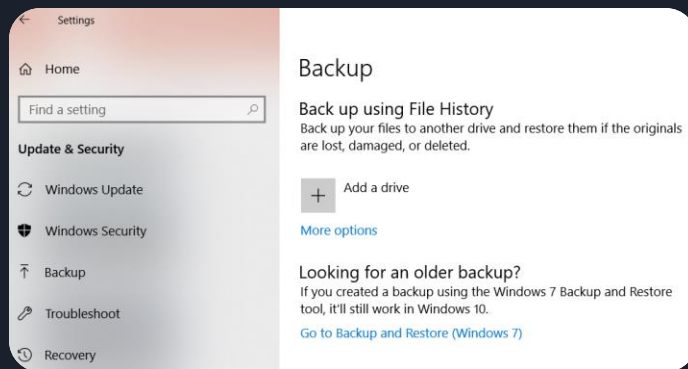

# Windows 10 Backups (Example)

- *Specifications:*
  - Specify **which files/folders** to backup by *Excluding Folder Locations* in the settings
  - Specify **how often** to make backups & **how long** to store backups in the Advanced Settings

# Windows 10 Backups (Example)

- To manage **Windows Backups** in Windows 10 go to:
  - **Start > Settings > Update & Security > Backup**
- More info available at [Windows Support](#)
- Note that **Windows 7 & 8.1** use an older tool called **Backup & Restore**

# Summary

- We *investigated* how specifications & requirements relate to ICT systems, both hardware and software
- Looked at examples about graphics cards and managing system backups
