Grass installation.
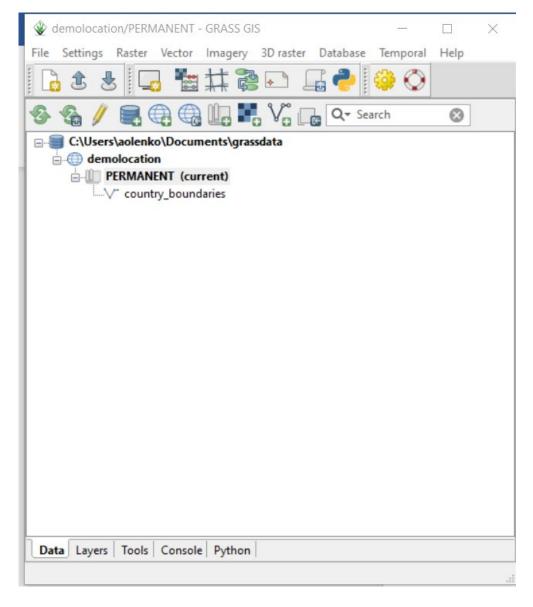

1. Download a current stable GRASS release from
   https://grass.osgeo.org/download/software/ms-windows/
2. Run the downloaded file (for example, WinGRASS-8.0.0-3-Setup.exe)
3. During installation, select all components to install on the step "Choose components"
4. Check that the data sets **natural-earth-dataset** and **nc_spm_08_grass7** are installed.
   If not, go to the GRASS site and download them directly:
   - nc_spm_08_grass7 can be downloaded here
   https://grass.osgeo.org/sampledata/north_carolina/nc_spm_08_grass7.zip
   - natural-earth-dataset can be downloaded here
   https://zenodo.org/record/3762852/files/natural-earth-dataset.zip?download=1
5. Start GRASS. If your GRASS data directory does not have **natural-earth-dataset**
   and **nc_spm_08_grass7,** as on this image

unpack the downloaded zip files(**natural-earth-dataset.zip and
nc_spm_08_grass7.zip**) and move these folders to your GRASS data directory.

6. Restart GRASS. Now you should be able to see the following structure
